Product Status Notice – Senstar 100 Alarm Monitoring & Control System

Senstar 100 Product Status

Senstar herein informs its valued representatives, dealers, and customers of the current status of the Senstar 100 Alarm Monitoring & Control System. This status information applies also to the Perimitrax Central Controller and IntelliFLEX Central Controller products.

Senstar 100, first introduced in 1985, is now no longer supported by Senstar Corporation. New computer units can no longer be provided, existing units cannot be repaired, and the Senstar 100 software is no longer maintained or supported.

The affected products are as listed in Table 1 below.

Product Migration

Customers using existing Senstar 100 systems for alarm display and management are recommended to consider upgrading to a newer Security Management System such as Senstar's StarNeT 1000 system.

Customers using existing Senstar 100 systems for sensor control only with the alarm data being exported using the StarCom protocol over a serial link are recommended to consider upgrading to Senstar's PC-based Network Manager software package.

For further information

Please direct inquiries or requests for quotation to your local Senstar representative – see www.senstar.com for contact information.
